step ④ Selected tool

→ goto parameters → selected tool

List of Drill

(one Page opened)
↓
only change
List of DRILLS.
- close befor drills
- select 0.8 drill
- select 1.0 drill
- select 1.1 drill

↓
click ok.

step ⑤ List of drill

→ goto Machine → list of drill
⇒ just for matched or not matched checking purpose.

step ⑥ Contour

→ goto Machine → · contours
↓
Calculate contour
↓
Give ok
(it gives final prototype board view)
(given board analizing view)

step ⑦ G-Code generation.

→ goto Machine → select Mill → · shows one pop up
output file
↓
select ☑ Section #1

output
☑ Section #1

Any circuit · engraving & circuit & 3 drill (0.8, 1.0, 1.1)

Step (3)

List of Drill checking

→ goto Machine → last option List of Drill (Now it will show list of drills)

diameter	No.
0.81	
1.02	
1.12	

• Not available 0.8 drill bit (holes) Resistor & capacitors ICs

• 0.81 → Any drill → Right click (select one drill)

(0.8) for circular soldering process

↓ edit all identical Pad

Pad apertures → change to 0.8

size 1.6 Drill 0.81

pad size 0.8 → double it → 1.6 size

Matched for checking or not matched size changed to 1.6.

goto Machine → List of Drill

• 1.12 → Any one drill → Right click

(1.1)

↓ edit all identical pad

Pad apertures

size 2.2 Drill 1.1 / 1.02

for Oval shape soldering

→ first x change to define as pad

1.02 Rightclick

(1) Some process like circular

1.02 → 1.00

Pad apertures

size 2 Drill 1

Step (4) Selected to

→ goto parameters →

step (5) List of d

→ goto Machine → list of dr

⇒ just for ma

step 6 Contour

→ goto machine → cont

step (7) G-Code

→ goto Machine → select Mill

Any circ

→ Now drill & Select is matched.

Step ② Allignment process

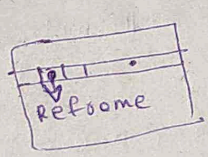
in this we should allign the circuit with the outline

→ Goto display → select Layer #6 . (Black colour line changed to some other colour)

→ goto file → offset → Co-ordinate offset

Shift manually.

no cursor will change to hand set. Now allign according to circuit.



click Reframe option . (Auto allignment)

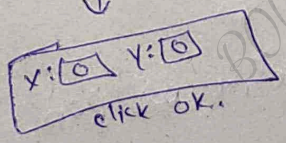
→ goto display → select layer 1 . (Now circuit will be selected)

fixed predefined layer { layer 5 → drill layer
layer 6 → cut layer

→ goto file → select flip horizontal (circuit changed to left to right (Mirror image)

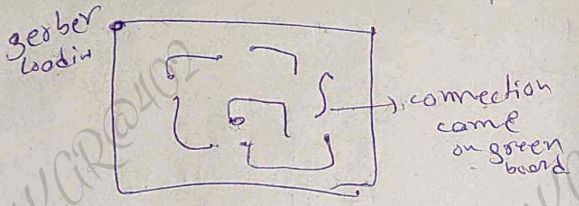
~~File origin~~

→ goto file → origin



Gerber loading
Step 1

1. Goto File → open (click)
   ↓
   • New circuit
   ↓
   choose your done gerber_file.
   • if not shown → click/select (All files)
   ↓
   • Select BOTTOM layer & open.
   gerber load close [X]
   pad aperture close [X]



• File → open → additional layer.
   ↓
   select 'cut' layer
   ↓
   open
   → dimension will be loading to select
   • give yes for foston tool

• File → open → Drill
   ↓
   select NCD file (open)
   ↓
   if incase Drill & circuit matches mean → Yes
   Not matched → NO
   ↓
   ⊙ trailing & predefined. (select) ⊙

→ Now drill & select

Step ② Alignment pro
in this we have to
outline

→ goto display → se

→ goto file → offset

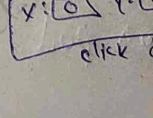
select

→ goto display → layer

fixed predefined layer { layer 5 → layer 6 →

→ goto file → select

→ goto file → origin



• Design completed

4. Software → Eagle - designing purpose
2. Copper CAM
3. Auto leveler
4. Mach-3 mill

• Why will we generate Gerber

Copper CAM (software purpose) → gerber file → converted to → G code (geometrical codes) (X, Y, Z-axis)

gerber file

Why converted ↓ bcoz machine understand G-code

Bottom

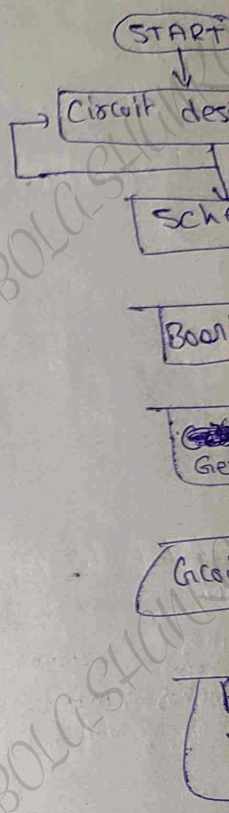
EAGLE → PCB software (not simulation).

PCB Design Flow

Nxt two days → EAGLE & PCB design softwares

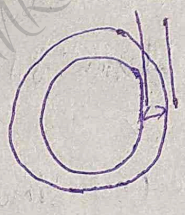


Arduino – blue colour solder masking
Raspberry pi – green colour

- Why colour different are used in PCBs.

→ Main reason to protect from oxidising
(main layer is copper layer)
: Colour depends on customer apperiens
Mostly green → track is very clear.
(after 1(or) 2 year very clearly visible for tracks)

Annular Ring:



Bare Board:

With components, the board is Bare Board.

Track:

track width → depends on power consumption or current consumption
depends on application – track width is designed.

Bill of Materials (BOM):

Types of PCB

- Single layer
- Double layer
- Multilayer (in layers) for connections
- Rigid flex PCB - laptop (keyboard to screen connections)
  - maintain the life
  - old nokia flip phone } examples
  - popup camera
- Aluminium PCB (observes heat)
  - Home appliances
  - LED Boards / LED panner

component placement
